Preface .....	5
<b>1 Linear systems and Gaussian elimination .....</b>	<b>11</b>
1.1 Linear system .....	11
1.2 Geometry of linear systems .....	13
1.3 Solving linear systems .....	16
1.4 Gaussian elimination .....	18
1.5 Free variables and parameterizations.....	26
1.6 Rank of a matrix .....	27
Problems.....	31
<b>2 Vectors and vector spaces.....</b>	<b>35</b>
2.1 Introduction to vectors.....	35
2.2 Vectors and coordinates.....	37
2.3 Parametric description of lines and planes.....	41
2.4 Inner products.....	43
2.5 Projections and the Cauchy-Schwarz inequality .....	45
2.6 Span and linear independence .....	47
2.7 Vector spaces .....	51
Problems.....	57
<b>3 Matrices and determinants.....</b>	<b>61</b>
3.1 Matrices and matrix algebra.....	61
3.2 Determinants .....	69
3.3 Determinants and Gaussian elimination .....	71
3.4 Minors, rank and linear systems .....	75
Problems.....	80

<b>4</b>	<b>Eigenvectors and eigenvalues</b> .....	<b>83</b>
4.1	Introduction to eigenvectors and eigenvalues.....	83
4.2	The characteristic polynomial.....	87
4.3	Diagonalization.....	92
4.4	Nonnegative matrices and Markov chain.....	96
4.5	Spectral theory of symmetric matrices.....	101
4.6	Definiteness of quadratic forms.....	106
	Problems .....	117
<b>5</b>	<b>Unconstrained optimization</b> .....	<b>121</b>
5.1	Functions in several variables.....	121
5.2	Partial derivatives .....	124
5.3	The Hessian matrix .....	128
5.4	Unconstrained optimization .....	129
5.5	Convex and concave functions.....	133
5.6	Quadratic functions .....	136
5.7	Envelope theorem.....	138
	Problems .....	143
<b>6</b>	<b>Constrained optimization</b> .....	<b>145</b>
6.1	Constrained optimization problem .....	145
6.2	The Extreme Value Theorem .....	146
6.3	Introduction to the method of Lagrange multipliers .....	148
6.4	Lagrange problems.....	150
6.5	Kuhn-Tucker problems .....	157
6.6	Envelope theorem.....	165
6.7	Minimum variance portfolios.....	169
	Problems .....	175
<b>7</b>	<b>Differential equations</b> .....	<b>177</b>
7.1	Introduction to differential equations.....	177
7.2	Modeling change using differential equations .....	179
7.3	First order differential equations.....	182
7.4	Separable differential equations.....	183
7.5	Linear first order differential equation.....	185
7.6	Superposition principle .....	188

7.7	Exact differential equations.....	191
7.8	Equilibrium states and stability .....	194
7.9	Second order differential equations .....	197
7.10	Linear second order differential equations.....	198
	Problems.....	204
<b>8</b>	<b>Difference equations.....</b>	<b>207</b>
8.1	Introduction to difference equations.....	207
8.2	Linear first order difference equations .....	209
8.3	Equilibrium states and stability .....	210
8.4	Linear second order difference equations .....	211
	Problems.....	215
<b>9</b>	<b>Systems of differential and difference equations .....</b>	<b>217</b>
9.1	Introduction to systems of differential equations .....	217
9.2	Linear systems of differential equations.....	219
9.3	Equilibrium states of systems of differential equations .....	223
9.4	Linear systems of difference equations.....	225
9.5	Equilibrium states of systems of difference equations .....	228
	Problems.....	229
<b>A</b>	<b>Complex numbers and trigonometric functions.....</b>	<b>231</b>
A.1	Complex numbers.....	231
A.2	Conjugation and complex roots.....	235
A.3	Polar coordinates and de Moivre’s formula.....	238
A.4	Angles in radians.....	241
A.5	Trigonometric functions.....	242
	Problems.....	246
<b>B</b>	<b>Indefinite integrals.....</b>	<b>247</b>
B.1	The indefinite integral.....	247
B.2	Computing indefinite integrals.....	248
B.3	Integration by parts .....	250
B.4	Integration by substitution .....	251
B.5	Integration of rational functions .....	252
	Problems.....	257
